CUSTOM ROMS

March 29, 2021

CUSTOM ROMS

-Ashvani kumar

As we know android devices are used widely in the world and the best thing about android is that it has open source code which can be modified by the developers according to their needs. These modified roms are called custom roms.

The custom rom has only about 1% of market shares which make them more secure from the hackers.

As per report an iphone user's are most targeted by the hacker than android and custom roms.

The main reason why people shifts to custom is because the mobile manufracting companies only provides about 2-3 years software updates but a custom will make them alive for many years by regular updates.

Some of the custom roms provides more features than the companies custom ui skins or google stock rom without any loaded bloatwares.

SOME CUSTOM ROMS

To install custom roms user has to unlock the bootloader and flash the custom recoveries on the phones.

Recoveries helps the users to flash the custom roms in their devices. Before any process user should take a backup of their devices.

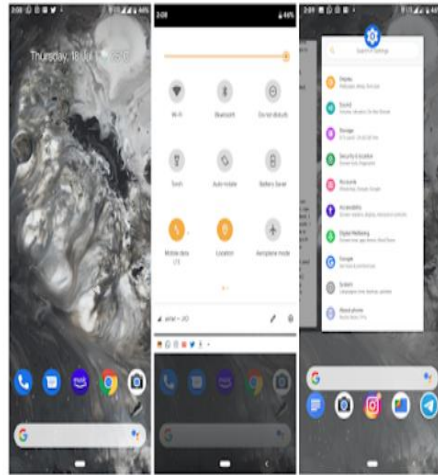

1)LINEAGE OS

Earlier this os was well known OS named as CYANOGENMOD which were used by brand like oneplus but in 2016 it was discontinues and the developer kept alive this project under the name of Lineage os.

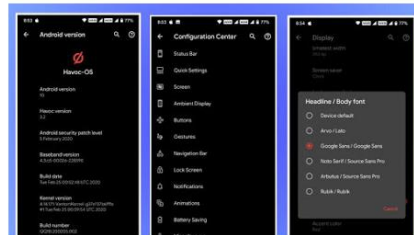

PIXEL EXPERIENCE

This rom is best custom rom for that users who has the non pixel phone and want the experience of the pixel phone. This rom is widely supported on android devices.

HAVOC OS

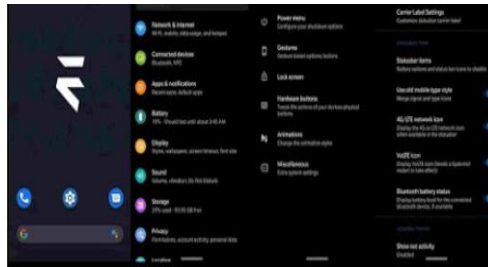

This rom is the most customizable rom as it provides tones of features which can beat a flagship level device in Os experience. Every day you will explore new features in this rom.

EVOLUTION X

If your device is running slow and you want to make it faster as it was before than you can use this rom.

These were the roms which were experienced by me. You can try more custom rom on basis of your needs. You can download roms from site like XDA developer by just typing your device model on google.
